Quick Start Guide – AOF Systems

Getting Started

This page provides a brief overview of AOF for users. Please ensure the responsible person has read the full user manual for installation and commissioning information.

Do not run this unit without reading the full manual and completing installation

The full user manual is available from www.airbench.com/manuals

Prior to use

Check the system logbook to ensure no routine maintenance is required.

About AirBench

AOF is a self-contained mist filtration system using multiple filter stages designed to capture coolant mist from machine tools and return cleaned air to the room.

General use

To use AOF, simply switch on at the main isolator or DOL starter, subject to installation.

Monitor filter condition using the Red/Amber/Green light on the side of the unit. If Green, unit is operating as usual. If Amber, check prefilter. If Red, check after filter.

If installed to an enclosed machine, ensure you are aware of the clearance time recorded in the system commissioning certificate. Do not open machine enclosure until clearance time has passed following completion of cycle, and enclosure is clear of mist.

AOF Maintenance Log

Serial No: _____

Action	Date	Initial

Record all routine and unplanned maintenance on this form.
Maintain with machine for operator use.
